WATER RESILIENCE WORKSHOP

24 September 2026 | thestudio, Birmingham

Robust water systems and supply are critical to the **UK's infrastructure**, **public health**, the **economy**, and the **environment**. Regulatory guidance, population growth, climate change and public expectations are continuously evolving – **putting more pressure on water utilities than ever before.**

The **WWT Water Resilience Workshop** will bring together strategic and operational leaders from water companies, as well as regulators, researchers, engineers, supply chain partners and innovators - to ensure safe, dependable drinking water supplies in the UK, manage flooding and drought events, tackle pollution and contaminant risks and protect ecosystems.

The workshop is designed to encourage collaboration and practical action on resilience across water networks and systems. This is an opportunity for the industry to **stress-test their resilience strategies**, actively working to **prevent crises**, enhance **communication strategies** and build confidence in the sector.

The event provides a valuable platform to showcase innovation, build strategic relationships and **position your organisation at the forefront of resilience** and **risk management in water**. By supporting the workshop, you demonstrate a clear commitment to safeguarding essential services and enabling the long-term sustainability of the UK's water networks.

Contaminants & Micropollutants

Regulation, Investment & Risk

Resilience, Collaboration & Public Perception

Asset Health Strategies

Environmental Protection

Smart Networks & Monitoring

Public Health & Crisis Management
